1. **Topic and Team Assignment**
Topics and teams are assigned during the lectures on 13th/15th October 2026, in person on-site only. Students must present a valid student ID card.

2. **Deadline for Topic and Team Assignment**
The last opportunity to receive a topic and a team is during the lectures on 27th/29th October 2026, also in person on-site only. Arrival in class must be no later than 09:45. Students must present a valid student ID card. Beginning the case study at the second deadline will negatively affect the quality of results, is strongly discouraged, and will be done at the student's own risk. Topic and team assignments after that date are not possible.

3. **Topic Clarification and Questions**
All topic assignments and case study questions will be handled only during lectures in person on-site. Assigning topics or providing individual supervision outside the lecture is not allowed to ensure fairness among all students regarding exam-related tasks.

4. **Source Code, Scientific and Technical Paper and Video Presentation Submission**
The scientific-and-technical paper (.PDF) presenting the case study results must be submitted before 18th January 2027 at 18:00 CET (.PDF in iLearn – strict technical cut-off deadline). The submitted paper must be formatted in IEEE two-column format. The length of the paper must be 8 pages. The expectation is that the paper meets "Accepted for Publication" standards for an IEEE conference. Each part of the paper must be clearly assigned to one individual student of the team by adding the name and matriculation number of the responsible student to the heading of each section. On top of each page must be the name of the document: **2627_CAS_paper_matriculationnumber_matriculationnumber_matriculationnumber.pdf**
On the bottom of each page must be a page number. All students in a group must upload the paper in iLearn - not only one team member.

Additionally, 18th January 2027 at 18:00 CET, a recorded scientific-and-technical PowerPoint presentation (.MP4) of the group presenting the paper's content, must be submitted together with the paper. Hereby, each student must present an individual contribution to the case study results. The name and matriculation number of the individual student must be written on the caption of the video while presenting. The presentation must include a cover slide with the title of the presentation, name of the course, name of the supervising professor, and matriculation numbers of the students. iLearn only allows file sizes up to 20 MB to be uploaded. The PowerPoint video presentation will exceed this limitation. Hence, students must upload the video presentation to a shared folder containing the full video presentation. The submitted video file in the shared folder must be named: **2627_CAS_video_matriculationnumber_matriculationnumber_matriculationnumber.mp4**
The link to the video presentation file must be included in the submitted paper **as clickable link and QR code**. All students in a group must ensure that the link is provided on the paper and accessible - not only one team member.

The source code (.zip) must be zipped and submitted to iLearn together with the scientific and technical report before 18th January 2027 at 18:00 CET. The zipped file must be named **2627_CAS_source_matriculationnumber_matriculationnumber_matriculationnumber.zip**
All students in a group must upload the paper in iLearn - not only one team member.

5. Grading of the Case Study Results
The individual contribution to the submitted scientific and technical paper and video presentation accounts for 50% of the individual total grade of each student. The student teams will present their technical results during a competitive technical demonstration on 21st January 2027 between 14:00 and 17:30 CET. This competitive technical demonstration accounts for 50% of the individual total grade of each student.
